

Vancouver Aerial Lift Train the Trainer

Vancouver Aerial Lift Train the Trainer - The train the trainer program intended for aerial lifts helps to teach the trainers how to safely train potential operators in an industrial surroundings. Trainers would be given in-depth instruction about the workings of aerial lift machines. The program is provided on an open enrollment basis and delivered at select training locations. Prior to certification, trainers are evaluated and scored on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the top training provider within the industry, we offer top notch hands-on training. We give a lot of opportunities to practice the concepts and techniques which are taught in the classroom. In addition to hands-on experience, trainers develop general understanding of instructional methods and equipment theory, field and classroom communication skills, and ability to successfully train and evaluate operators. Trainers will gain knowledge about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts in a classroom and/or field situation. Knowledge requires a training component to be effective in workplace conditions. There are three factors of machine operation which the trainer should learn how to convey to operators: what to perform; how to do it; and why it must be done.

In the program, trainers would be provided with the latest, detailed reference material to better help them convey the information to machine operators. The manuals used, contain detailed information about all aspects of industrial mobile machine operator training. Included within the package are training aids which provide a visual reference to improve the learning experience. The equipment-specific training products include essential materials for both the trainer and the operator: videos/DVD's, overhead transparencies, equipment models, safety message posters; digital training aids and stability pyramid.
