Vancouver Manlift Operator Certification

Vancouver Manlift Operator Certification - Our scissor platform and aerial lift certification and training empowers participants with a general understanding and knowledge of the safe and efficient utilization of "Power Operated Mobile Work Platforms," under all of the existing regulations in the industry. Upon successful completion of training, the participants will be able to recognize and understand certain health and safety related hazards connected with operating aerial and scissor lifts.

There are different affiliated locations in your district providing Manlift Operator Certification Programs. Those training are provided with in-depth instruction on safe operation and regulations along with extensive hands-on training. The knowledge and skill level of every trainee is assessed and those who are capable of demonstrating an acceptable level of operational ability would receive employee documentation and Operator Certification cards.

Theory Training
The trainer would help the one training through a review of the theory training making use of many visual aids. The trainee will work out of a workbook that includes all the necessary rules. Other topics like for instance safe operating procedures, different equipment types in addition to different associated applications and sizes, pre-use checks and general work place safety are explored individually.

Theory Evaluation
The Theory Evaluation starts with a written exam based upon the concepts included in the operator's reference guidebook. These graded are graded and returned to the trainees. The exams are then reviewed to guarantee understanding and a minimum score of 70 percent is considered necessary in order to pass this part of the training.

Practical Training
The practical training is included in the hands-on part. It is here that the trainees are shown the safe operating procedures, such as the shutdown and parking measures and the pre-use inspection procedures. Each trainee has the chance to operate the equipment and practice the skills they learned in Theory Training under the helpful eye of the program trainer in an environment which is safety controlled.

Practical Evaluation
The Practical Evaluation is where the ones training are assessed to assure they have reached a minimum level of skill. The ones training are then evaluated on an individual basis utilizing the machinery in a reasonably challenging course setting. As soon as the assessment is done, the ones training are de-briefed and given the chance to deal with any problems they might have regarding whatever part of the course. Each and every successful trainee's employer will be given the official records and documents shortly after the course has been finished.
